

TERMINUS

Accelerate node setup and management.

Terminus helps you get your node up and running, all from one intuitive user interface.

Intuitive user interface.

Designed with and for edge users by a dedicated team of experienced UX professionals and veterans. Anyone can easily navigate the MaterialUI compliant user interface to visualize important data and execute objectives at speed.

Information at the speed of relevance.

Vertical and horizontal information flows provide necessary data to decision makers at all echelons in real-time. Visualize the status, health, and flow of your connected devices.

Monitor and manage configurations.

Multiple, authenticated users can access and manage Terminus at the same time. Compare baseline and incoming configurations to easily reconcile differences.

Prioritize and synchronize what matters most.

Create, log, and track network events throughout the activity lifecycle. Organize day-to-day events and create custom alarms to ensure operations are timely and impactful.

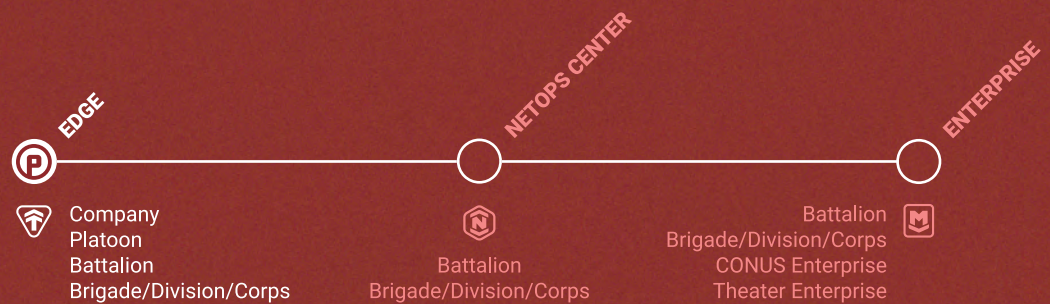

System Requirements

Memory	4GB
CPU	4 CPU cores
Disk Space	50GB (SSD recommended)
OS	Linux/Windows - Bare Metal or Virtual Machine

Enhance Your NetOps Capabilities

Use Terminus on its own or with other CodeMettle products. Report status up to Nexus and Meridian for increased situational awareness. Terminus utilizes Pulse to help control, prioritize, and route data in the most challenging environments.

Edge to enterprise NetOps, simplified.

CodeMettle was established in 2009 to simplify the management of the most complex networks. Our intuitive software products consolidate fragmented data, processes, and operations into one common operating picture.
